## WATER HAND PUMP & 5gal / 19ltr BACK PACK

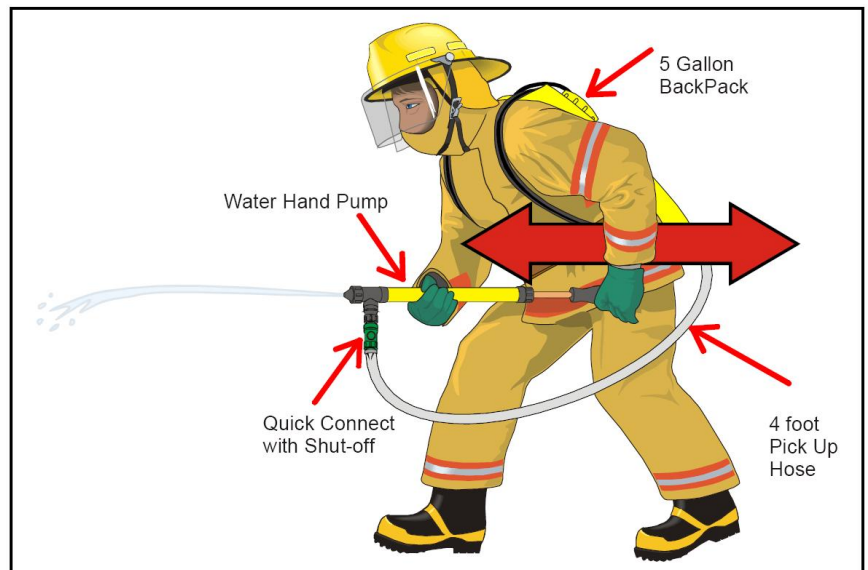

Part No: SBP

The SBP is a professional Water Hand Pump and Back-Pack system. Its features include a comfortable handgrip attached to a brass tube piston shaft, an inner brass sleeve; fully protected by an outer ABS plastic sleeve and a straight stream pressure nozzle. The average user will be able to throw water from the pump over a distance of 25 feet (8m) or more. The hand pump can be "field-stripped" for cleaning without the need of any tools. Made from corrosion-proof materials, it only requires an occasional application of lubricating grease or Vaseline on the piston O-ring at the end of the piston shaft.

The 5 gallon (19lt) Back-Pack features a 4" Filler Port with a removable debris screen, a Pull-Tab mounted on each side of pack to assist opening bag during filling, a standard 3/4" Garden Hose Thread Outlet port, 2" wide high strength Nylon webbing shoulder straps (Backpack style), protective shoulder pads and a quick release buckle across the chest.

### Instructions:

1. Ensure that the Quick Connect shut-off on the 4 foot long Pick-Up Hose is in the off (closed) position. Attach threaded end of pick up hose to outlet on back-pack.
2. Fill back-pack with water (capacity 5 gallons) by opening and pouring the water into the 4" wide filler port. Securely close cap on filler port.
3. Connect the Quick Connect end of the Pick-Up Hose to the male Quick Connect nipple below the check valve on the Water Hand Pump.
4. Turn the Quick Connect shut-off dial to the ON (open) position.
5. Point nozzle at area to be sprayed. Pull back on pump handle until it stops push forward (like a bicycle pump). Repeated pumping action will draw water from the back-pack through the pick-up hose.
6. Most users will be able to throw the water stream 25 feet or more.

### Piston Rod Assembly
