VACUUM RELIEF DISC

Part No: SVRD

The SVRD is a very simple device to relieve the vacuum created inside a standard plastic fuel container when fuel is drawn from it. It consists of a plastic disc with a 1/4" barb on each side and a built-in, one-way mini valve. When installed in a fuel container, it allows the engine on a gas powered pump to draw fuel from the container without encountering a vacuum lock.

The built-in mini valve will open when enough vacuum is created within the fuel container.

Cut a length of 1/4" fuel hose long enough to reach bottom of container. Install hose onto Inside Face barb.

A hose clamp is recommended.

Insert hose length into container.

Ensure hose length reaches bottom of container

Secure screw cap in place.

Install supply hose onto Outside Face barb. A hose clamp is recommended.
